

MOBILE 50

Active portable Speakers

The Mobile 50 can be used for versatile applications, independent from the mains-network. The integrated 50W/RMS digital amplifier offers high efficiency at lowest power consumption.

The rechargeable battery of the Mobile 50 provides up to 5 hours of performance being small and lightweight at the same time. Professional sound is being reproduced by a 2-way system with two 6,5" Woofers and a Tweeter. Beside of the Mic-/Line-Input with XLR-/Jack Combo-Connector the Mobile 50 is equipped with an integrated Wireless receiver ready for instant operation with a wireless transmitter.

The power consumption can be optimised for different applications due to the optional "sleep-Mode", detachable wireless-receiver, as well as the audio performance due to the switchable "Vox-Mode" with optimised frequency response for speech. The external power supply recharges the battery and allows also the permanent use of the speaker connected to the mains. Included is a convenient handle to carry the product. Further stand adaptors for speaker- or microphone stands and a convenient bag are available as options.
